Overburden, 306
Overconsolidation, 33–38, 71, 306

Penetrometers, cone
Autonomous Seafloor Strength Profiler, 354
centrifuge flight, use during, 209
comparison with other methods, 247, 293, 306, 339
relative preference for, 56
Perimeter ratio, 18
Piezocone tests, 247, 293
Plasticity, 13, 150, 293, 339
Portland cement, 220
Preconsolidation pressure, 306.
Pressuremeters, 247
Progressive failure, 150

Rest period, 13, 15
Rod-soil friction, 104
Rotation rates, 13, 53, 117

Screw-plate apparatus, 247
Sensitivity of clays, 117, 166, 233
SHANSEP (stress history and normalized soil engineering properties)
correlation with other methods, 196, 293, 306
definition, 33
usage, 56
Shear rate, 46, 117
Shear strength (See also Testing) cement, marine clay improved, 220
undrained clay
anisotropy, 30–32, 82, 88, 166, 267
Autonomous Seafloor Strength Profiler, 354
during centrifuge flight, 209
low strain, 193
measurement factors, 13, 117
micromorphological aspects, 182
normalized, 293
offshore, 46
residual/remolded, 166
Skempton relationship, 348
stresses, in-situ and yield, 71, 267
vane and field strengths, correlation of, 82–85
Shear stresses clays
distributions in, 15
effective, 131
horizontal, 71
yield, 27, 71
vanes, rectangular, distributions in, table, 90
Shear testing (See Testing)
Silt (See Clays; Marine sediments)
Site investigation, 293
Slag, blast furnace, 220
Sliding block analysis method, 277
Soil stabilization, 220
Soils (See also Clays)
carbonate, 339
instrumentation (See Test apparatus; Vane types)
mechanics, 13, 150
progressive failure, 150
properties, 46, 306
Stability analysis (See Testing)
Stabilization, soil, 220
Standards
ASTM C 403: 229
ASTM D 653: 166
ASTM D 2573: 1, 5, 8, 52, 106, 183, 321, 335, 341
ASTM D 4698: 1
national standards, comparison of, table, 319
offshore application of onshore test standards, 318
standard field vane test, 14
Static moduli, 193
Strain-rate effects, 13, 53, 117
Strain softening, 150
Stresses
effective, 131
horizontal, 71
lateral, at rest, coefficient of, 339
yield, 27, 71
