Foreword

The Third Symposium on Applications of Automation Technology to Fatigue and Fracture Testing and Analysis was presented in Norfolk, Virginia on 14 November, 1995. The symposium was held in conjunction with the 13–16 November 1995 meeting of ASTM Committee E8 on Fatigue and Fracture, which sponsored the symposium. Arthur A. Braun, MTS Systems Corporation, and Leslie N. Gilbertson, Zimmer, Inc., served as chairmen of the symposium and editors of the resulting publication.
Contents

Overview 1

DATA ACQUISITION

Networked Data Acquisition Systems for Strain Data Collection—G. MCLEAN, B. PRESCOTT, AND M. ELLENS 5

Fatigue and Reliability Assessment Incorporating Computer Strain Gage Network Data—M. ELLENS, J. PROVAN, G. MCLEAN, AND M. SANDERS 19

Cycle-by-Cycle Compliance Based Crack Length Measurement—R. SUNDER 33

SIMULATION

Computer Modeling and Simulation in a Full-Scale Aircraft Structural Test Laboratory—R. L. HEWITT AND F. J. ALBRIGHT 81

TEST CONTROL

Computer-Controlled High Strain Rate Compression Test System—C. S. VENKATESH, R. V. PRAKASH, AND R. SUNDER 99

Adaptive PID Control of Dynamic Materials-Testing Machines Using Remembered Stiffness—C. E. HINTON 111

Characteristics and Automated Control of a Dual-Frequency Servohydraulic Test System—K. REIFSNIDER, S. CASE, AND L. MOSIMAN 120

Control of a Biaxial Test Using Calculated Input Signals and Cascade Control—F. J. ALBRIGHT AND L. E. JOHNSON 147
