Computerization and Networking of Materials Databases: Second Volume

J. G. Kaufman and J. S. Glazman, editors

ASTM
1916 Race Street
Philadelphia, PA 19103
NOTE
The Society is not responsible, as a body, for the statements and opinions advanced in this publication.

Peer Review Policy

Each paper published in this volume was evaluated by three peer reviewers. The authors addressed all of the reviewers' comments to the satisfaction of both the technical editor(s) and the ASTM Committee on Publications.

The quality of the papers in this publication reflects not only the obvious efforts of the authors and the technical editor(s), but also the work of these peer reviewers. The ASTM Committee on Publications acknowledges with appreciation their dedication and contribution of time and effort on behalf of ASTM.

Foreword

When plans were laid for an International Symposium on the Computerization and Networking of Materials Databases, it was with some hesitation that it was designated the First International Symposium, thereby signifying the occurrence of others. However, the confidence displayed by that move has proven justified, and clearly indicated by the content and the attendance at the Second International Symposium, held in Orlando, Florida, on 29 Nov.–1 Dec., 1989, just over two years after the first one. The content of this Volume 2, covering the Proceedings of that Second Symposium offer further support for the importance of this activity.

Such successful meetings do not occur without the strong support of a number of individuals. I want to express special thanks to John Rumble, Chairman of ASTM Committee E49, and Jerry Glazman for their help as our representative on the ASTM Publications Committee and my principal associate on the Technical Program Committee, respectively.

A great deal of thanks are due our associates in the international community for their very strong support of this conference, equally as clear from the high percentage of international papers in this volume as for the 30% international attendance at the Symposium itself. Special recognition in this area is due Prof. A. D. Kozlov for bringing the USSR interest squarely in support of the activity, and Magnus Areskoug of the Swedish Materials Information Service for adding new and very strong Scandinavian influence. Dr. A. J. (Tony) Barrett has also maintained excellent collaboration of CODATA interests with those of ASTM Committee E49, and thereby leveraged the efforts of both groups.

Thanks to all authors and attendees for their valuable additions to the ultimate utility of this volume.
Contents

Overview

INTERNATIONAL

Materials and Substance Data Banks in COMECON Countries and in the USSR—A. KOZLOV 7

The Benefits and Economics Consequences of Materials Property Databases—ANTHONY J. BARRETT 17

Development and Coordination of Materials Data Banks in France—BERNARD MARX 26
Discussion 36

Cooperation—A Good Chance for Industry in Setting Up Materials Data Banks—ANNI BRANDSTÄTTER 37
Discussion 43

ALUSELECT—Engineering Property Data for Aluminium Alloys—ROLF SANDSTRÖM, PETER SCHÖNHOLZER, AND Ebrahim MOOSAVI 44

Materials Designation Systems: Their Problems and Possible Solutions—KEITH W. REYNARD 57
Discussion 69

STANDARDS

Standards for Materials Databases: ASTM Committee E49—JOHN RUMBLE 73

The Role of Metadata in the Design and Operation of a Materials Database—JACK H. WESTBROOK AND WALTER GRATTIDGE 84

Increasing Data System Responsiveness to End-User Expectations—J. GILBERT KAUFMAN 103
Discussion 112

Use of Abstraction in Creating Data Dictionaries for Materials Data Banks—PHILIP M. SARGENT 114
Discussion 131
Access Paths for Materials Databases: Approaches for Large Databases and Systems—JOHN RUMBLE 132

Data Sources of Mechanical and Physical Properties of Engineering Materials—
HANS WAWROUSEK, JACK H. WESTBROOK, AND WALTER GRATTIDGE 142

APPLICATIONS

The Development of a Computerized Materials Properties Database Management System—TIMOTHY L. GALL, MARTIN E. HELLER, AND FRAN CVERNA 161

Computerization of Composite Materials Data and Metadata—
EDWARD L. STANTON, KEITH J. MEYER, AND THOMAS E. KIPP, JR. 168

A Numeric Database for Tribology: Format and Application Issues—
A. WILLIAM RUFF, JOHN RUMBLE, AND SAID JAHANMIR 180

Fatigue Data Pooling and Probabilistic Design—M. T. YU, F. J. LU, T. H. TOPPER, AND P. IRVING 197

HIGHTEMP—A Database for Mechanical Properties at Elevated Temperatures—ROLF SANDSTRÖM, BO IVARSSON, AND JOAKIM LINDBLOM 214

Design Requirements-Materials Properties: A Basis for Materials Selection—
ULF BENGTSON, BIRGER KARLSSON, AND DAN PARSMO 230

A Computerized Database on Coatings and High Temperature Corrosion—
ROLAND STREIFF 251

Materials Property Database Requirements for Gas-Fueled Ceramic Heat Exchangers—RONALD G. MUNRO AND EDWIN F. BEGLEY 259
