IMPACT TESTING
OF METALS

A symposium
presented at the
Seventy-second Annual Meeting
AMERICAN SOCIETY FOR
TESTING AND MATERIALS
Atlantic City, N. J., 22–27 June 1969

ASTM SPECIAL TECHNICAL PUBLICATION 466
NOTE

The Society is not responsible, as a body, for the statements and opinions advanced in this publication.

Evaluation of Wear Testing, STP 446 (1969)
# Contents

Introduction ........................................... 1

The Role of Impact Testing in Characterizing the Toughness of Materials—W. T. MATTHEWS ........................................... 3

Effect of Strength and Thickness on Notch Ductility—J. H. GROSS ........................................... 21

Discussion ........................................... 50

An Evaluation of the Charpy Impact Test—G. HARSEM AND H. WINTERMARK ........................................... 53

The Charpy Impact Test—Its Accuracy and Factors Affecting Test Results—N. H. FAHEY ........................................... 76

Discussion ........................................... 89

Measurement of Fracture Toughness by Instrumented Impact Test—C. E. TURNER ........................................... 93

Materials Sensitive to Slow Rates of Straining—C. E. HARIBOWER ........................................... 113

Applications of the Instrumented Charpy Impact Test—R. A. WULLAERT ........................................... 148

Influence of Inertial Load in Instrumental Impact Tests—S. VENZI, A. H. PRIEST, AND M. J. MAY ........................................... 165

Significance of the Drop-Weight Tear Test and Charpy V-Notch Impact Test Results—R. J. EIBER, A. R. DUFFY, AND G. M. MCCLURE ........................................... 181

Investigation of Transition Temperature Tests for Line Pipe Materials—E. B. NORRIS AND R. D. WYLIE ........................................... 192

Drop-Weight Tear Test—Effect of Variables on Test Results—T. G. HEBERLING AND G. E. SELBY ........................................... 224

Dynamic Fracture Toughness Tests on A302-B Steel—A. J. BUSH ........................................... 259

Correlations Between $K_I$ and Charpy V-Notch Test Results in the Transition-Temperature Range—J. M. BARSON AND S. T. BOLFE ........................................... 281

Development of a Pendulum-Type Dynamic Tear-Test Machine—W. F. FRANZ ........................................... 303

General Discussion ........................................... 314
