Foreword

The Symposium on Testing for Prediction of Material Performance in Structures and Components was presented in two parts; Part I was presented in Anaheim, Calif., 21–23 April 1971 and Part II was presented in conjunction with the Seventy-fourth Annual Meeting of the American Society for Testing and Materials held in Atlantic City, N. J., 29 June–1 July. The symposium was sponsored by the ASTM Committee on Simulated Service and Performance Testing in cooperation with the National Materials Advisory Board and Technical Cooperation Program, Panel P-4. R. S. Shane, National Materials Advisory Board, Washington, D. C., served as symposium and program chairman.
Contents

Introduction 1

An Investigation of Fatigue Life Performance in Lap-Type Solder Joints—V. D. COOMBS 3

An Assessment of Accelerated Testing—WILLIAM YURKOWSKY AND D. W. FULTON 75

The Evaluation of Creep Damage in a Cr-Mo-V Steel—R. M. GOLDOFF AND D. A. WOODFORD 89

Determination of Degradation of Nylon 66 Using Differential Scanning Calorimetry—T. S. LONG 126

The Early Detection of Fatigue Damage by Exoelectron Emission and Acoustic Emission—J. R. MOORE AND S. TSANG 143

Verification of Structural Integrity of Pressure Vessels by Acoustic Emission and Periodic Proof Testing—D. O. HARRIS AND H. L. DUNEGAN 158

Empirical Strength Theories—G. P. SENDECKYJ 171

Predicting the Service Life of Neoprene Launch Tube Liner Pads for the Poseidon Missile—G. E. RUDD, J. F. MEIER, AND G. B. ROSENBLATT 180

Techniques for Smooth Specimen Simulation of the Fatigue Behavior of Notched Members—S. J. STADNICK AND JODEAN MORROW 229

Apollo Quality Through Predictive Testing—G. C. WHITE, JR. 253

Predictive Testing of Aircraft Structures—M. S. ROSENFELD 285
