CONTENTS

Introduction—B. H. Lloyd ........................................................... 1
Some Measurement Error Considerations in Bulk Sampling with Special Reference to
the Sampling of Fertilizer—Acheson J. Duncan ............................ 3
Discussion .................................................................................. 12
A Physical Interpretation of Coal Sampling Variances with Application to Sample
Reduction—B. A. Landry ............................................................... 15
Discussion .................................................................................. 24
The Effect of Increment Weight on Sampling Accuracy—W. M. Bertholf ........ 27
Discussion .................................................................................. 32
Studies in Ore Car and Abrasive Grain Sampling Variation—R. S. Bingham, Jr., J.
L. Gioele, and V. B. Shelburne .............................................. 44
Discussion .................................................................................. 57
FOREWORD

The papers and discussions in this 1958 Symposium on Bulk Sampling were presented at the Fifth Session of the Sixty-first Annual Meeting of the American Society for Testing Materials, held in Boston, Mass. on June 23, 1958. The paper by W. E. Deming of New York University on "The Purposes of Sampling", which was presented at the meeting, is not included in the symposium volume. A previous symposium on this same subject was held in 1951 and published by the Society as ASTM STP No. 114.

The 1958 Symposium was sponsored by ASTM Committee E-11 on Quality Control of Materials in cooperation with the Chemical Division of the American Society for Quality Control. The symposium was organized by B. H. Lloyd of Price Waterhouse and Co., who also served as chairman for the afternoon half of the symposium. Chairman for the morning half was Simon Collier of Johns-Manville Corp. Mr. Collier is also chairman of Committee E-11 on Quality Control of Materials.
THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country’s leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
