## SUBJECT INDEX

### A

- Adjusted compliance ratio, 60
- Adjusting parameter, 309
- AFGROW, 368
- Air and shielded gas, 589
- Aluminum alloy, 22, 124, 260, 506, 525, 557
ductile, 182
- Angled pre-crack, 340
- Area-average, 506
- ASTM E 399, 433
- ASTM E 647, 60, 87, 124, 203
- ASTM E 1457, 457
- ASTM E 1820, 323
- ASTM E 1921, 385
- Axles, 368

### B

- Biaxial loading, 245, 385
- Block loading, 368
- Boundary constraint, 182
- Boundary element methods, 167
- Brittle fracture, 167

### C

- Closure threshold, 73
- Common format, 323
- Compact specimens, 87
- Compact tension specimens, 457, 557
  mini-extended, 221
- Compliance, 525
- Compression precracking, 43
- Concise format, 323
- Constant amplitude loading, 151
- Constraint-based failure assessment, 245
- Correlation, 525
- Corrosion, 355
- Crack, 309
- Crack arrest, 539
- Crack branching, 491
- Crack closure, 3, 22, 60, 405, 415, 491, 525, 557
  plasticity induced, 203
- Crack depth, 539
- Crack-front shape, 506
- Crack growth, 138, 167, 203, 221, 355, 368, 457, 491, 506
  mechanisms, 22, 557
  out-of-plane, 124
  rate, 60, 124, 281

- Crack initiation, 457, 539, 589
  parameter, 472
- Crack length, 506
- Crack-mouth opening angle, 182
- Crack opening load, 525
- Crack propagation, 60, 281, 368, 405, 539, 589
  mismatch, 73
- Crack size effects, 415
- Crack threshold, 203
- Crack-tip opening angle, 182, 506
- Crack tip opening displacement, 260
- Crack volume ratio, 182
- Creep, 457, 589
- Cyclic J-integral, 87
- Cyclic tension, 281

### D

- Defect, 589
  small, 309
  surface, 457
- Ductile aluminum alloy, 182
- Ductile fracture methodology, 323
- Ductile metals, 3
- Ductile to brittle transition, 385

### E

- Elastic-plastic fatigue crack growth, 87
- Elastic-plastic stress and strain, 573
- Elastic-plastic fracture, 385
- Electron backscattered diffraction, 221
- Elevated temperature, 340, 589
- Endochronic theory, 573
- Endurance, 232
  limit, 299
- Energy dissipation rate, 182
- Environmental action, 557
- Environmentally assisted cracking, 151
- Equivalent initial flaw size, 60
- Eurcode 3, 167

### F

- Failure assessment diagram, 245
- Failure probability, 355
- Failure sensitivity factor, 232
- Fatigue, 3
- Fatigue endurance diagram, 309
- Fatigue limit, 309, 415
- Finite element analysis, 3, 43, 124, 405, 472, 506
- Flat fracture, 506
- Flaws, 589
- Fractals, 232
- Fractographic features, 151
FATIGUE AND FRACTURE MECHANICS

Fracture mechanics, 107, 138
Fracture toughness, 323, 433, 491
temperature dependent, 340
Fretting fatigue, 472

Fracture toughness, 323, 433, 491
temperature dependent, 340
Fretting fatigue, 472

Hardness, 415
High cycle fatigue, 87, 107, 299, 309
High strength steels, 151

Inconel 718, 87
Instability, 182

J-integral, 385
J-R curves, 323

K-concept, 167

Life prediction, 60, 457
Limit load, 245
Linear elastic fracture mechanics, 87
Load history, 107
Load ratio, 309, 525
Load reduction scheme, 405
Low cycle fatigue, 87, 573

Master Curve, 385
Material hardness, 415
Mean field theory, 573
Microdamage, 232
Micromechanics, 232
Microstructure, 73, 221
Mini-extended compact tension specimens, 221
Mixed-mode effects, 124
Mode I loading, 260, 491
Monte Carlo simulation, 457

NASGRO, 368
Near-threshold fatigue, 405, 557
Negative stress ratio loading, 107
Neuber's Rule, 573
Nickel superalloy, 340
Small cracks, 60, 107, 221, 415
Small defect, 309
Small-scale yielding, 3
Stainless steel, 457, 539
  super duplex, 73
Static fracture mode, 138
Statistical approach, 491
Statistics, 232
Steels, 589
  high strength, 151
Steel structures, 167
Strain-stress, 573
Stress biaxiality, 182
Stress intensity, 151
  effective, 60
Stress intensity factor, 124, 245
  threshold, 138, 415
Stress ratio, 151, 415
Stress relaxation, 472
Strip-yield, 368
Structural reliability, 355
Super duplex stainless steel, 73
Surface crack, 245, 355
  growth, 260
Surface-cracked thin plate, 260
Surface cracks, 245
System reliability, 355

T

Tearing resistance, 433
Temperature, 73
Test evaluation, 323
Test methods, 203
Thermal fatigue, 539
Three dimensional effects, 3
Three point bend specimens, 87
Threshold, 22, 43, 60, 73, 107, 309, 405, 415, 557
Threshold stress intensity factor range, 138
Ti-6Al-4V, 107, 299
  shot-peened, 472
Time of flight diffraction, 539
Toughness, 167
Trajectory path, 151
T-stress, 245
Tunneling, 506
Two-criteria-diagram, modified, 589

U

Ultrasonic testing, 299
Underloads, 107
Unloading compliance, 506
