Subject Index

A

Acceleration, sub-threshold load cycles, 45
Acoustic emission, 45
cord-rubber composites, 203
Addition model, 132
Air, MAR-M 247 fatigue damage behavior, 117
Aircraft tires, life prediction, 203
Al-Cu alloy, spectrum load cumulative damage, 19
notch root crack growth, 30
Alloys, fatigue behavior, 141
Aluminum alloy
total fatigue crack growth, 72
effective stress intensity factor range and crack propagation, 54
Amplitude loading, variable, 54
life prediction, 132
Arrhenius equation, long-term behavior prediction, 236

B

Bauschinger effect, 186
Block loading, cumulative fatigue damage behavior, MAR-M 247, 117

C

Carbon steel, fatigue lifetime prediction, 153
Cast nickel-base superalloy, cumulative fatigue damage behavior, 117
Coffin/Manson curve, 153
Composite material systems, damage-tolerant, 3
Copper matrix composite, tungsten fiber-reinforced, creep-fatigue life prediction, 91
Cord-rubber composites, life prediction, 203

Crack closure, 19
cyclic deformation, 72
loading sequences, 54
spectrum loading, 30
Crack density, metals under variable amplitude loading, 132
Crack growth
cyclic deformation, 72
loading sequences, 54
resistance spot welds, 169
spectrum load notch fatigue, 30
sub-threshold load cycles, 45
Crack initiation
notch root, 19
resistance spot welds, 169
Crack opening, 19
loading sequences, 54
spectrum loading, 30
Crack opening stress
hysteretic model, 30
intensity, loading sequences, 54
Crack rate prediction, cyclic deformation, 72
Crack tip, cyclic deformation around, 72
Creep cavity model, 91
growth model, 91
Creep-fatigue life prediction, 91
Critical element concept, 3
Critical strain energy density, low-cycle fatigue tests, 72
Cumulative fatigue damage, 19
Cyclic loading, fatigue lifetime prediction, 153
Cyclic plastic deformation, finite element method, 72
Cyclic strain, cord-rubber composites, 203
Cyclic stress-strain curve, fatigue lifetime prediction, 153

D

Damage Curve Approach, 117
Damage tolerance, composite material systems, 3
Delamination, cord-rubber composites, 203
Durability, composite material systems, 3
Dynamic creep, cord-rubber composites, 203
Dynamic strain gages, miniature, 141

E
Earth structures, polymeric materials, life prediction, 236
Effective stiffness models, 3
Effective stress intensity factor range, loading sequences, 54
Elastic modulus, degradation, 153
Elastomer composites, angle-plied fiber-reinforced, life prediction, 203
Energetic theory, 72
Exceedance curve, 19

F
Failure mechanism, 141
FALSTAFF, 19, 30
FASTRAN II model, 54
Fatigue behavior study, ultrasound, 141
Fatigue damage:
austenitic stainless steel, 105
cord-rubber composites, 203
cumulative, MAR-M 247, 117
sub-threshold load cycles, 45
Fatigue life equation, 153
Fiber-reinforced systems, design, 3
Finite element method:
cyclic deformation, 72
life prediction, cord-rubber composites, 203
Fractography, loading sequences, 54

G
Geosynthetics, life prediction, 236
Geotechnical environments, polymeric materials, long-term behavior prediction, 236
Grain boundary cavitation. 91

H
Heat affected zone, resistance spot welds, 169
Heat generation, cord-rubber composites, 203
High-strength low-alloy steel, resistance spot welds, 169
Hydrogen, high-pressure, MAR-M 247, fatigue damage behavior, 117
Hysteretic model, crack opening stress, 30

I
Interply shear, cord-rubber composites, 203

K
Kinematic hardening, 105

L
Life prediction:
angle-plied fiber-reinforced elastomer composites, 203
creep-fatigue, 91
loading sequences, 54
mechanistic methods, 3
metals under variable amplitude loading, 132
novel methodology, 153
polymeric materials in geotechnical environments, 236
resistance spot welds, 169
sub-threshold load cycles, 45
thermal-mechanical fatigue, austenitic stainless steel, 105
Linear elastic fracture mechanics, 169
Loading frequency, ultrasonic, 141
Loading ramp, 153
Load interaction, sub-threshold load cycles, 45
Load sequence effects, crack propagation, 54
Long crack growth, 30
spectrum load notch fatigue, 19

M
MAR-M 247, cumulative fatigue damage behavior, 117
Metal matrix composites, creep-fatigue life prediction, 91
Metals, variable amplitude loading, life prediction, 132
Micromechanical strength models, 3
Microstructural model, creep-fatigue life, 91
Miner's rule, 132
N

Near threshold crack growth method, 54
Neuber’s Rule, 186
Notch root
  crack initiation, 19
  fatigue, 19, 30
Notch strain analysis, proof loading, 186

O

Overload
  periodic, 45
  reverse plasticity criterion, 186
  single, cyclic deformation, 72

P

Pneumatic tire materials, life prediction, 203
Polymeric materials, geotechnical environments, long-term behavior prediction, 236
Proof loading, reverse plasticity criterion, 186

R

Rainflow cycle count, 19, 30
Ramberg-Osgood relation, 186
Range/damage-exceedance diagram, 19
Realized damage sum, 132
Residual fatigue lifetime, prediction, 153
Residual stress, localized plasticity, 186
Resistance spot welds, fatigue propagation life, 169
Resonance vibration, 141
Retardation
  delayed, 72
  sub-threshold load cycles, 45
Reverse plasticity criterion, proof loading, 186

S

Short crack growth, spectrum load notch fatigue, 19
Spectrum loading, cumulative fatigue damage behavior, MAR-M 247, 117
Spectrum load notch fatigue, 19
  root fatigue, elastic and inelastic conditions, 30
Stainless steel, austenitic, lifetime prediction, 105
Strain energy density
  proof loading, 186
  total, austenitic stainless steel, 105
Strain rate effect, 141
Stress amplitude, cord-rubber composites, 203
Structural stress, linear elastic fracture mechanics, 169
Sub-threshold load cycles, fatigue damage, 45
Superalloy, cumulative fatigue damage behavior, 117

T

Thermal-mechanical fatigue lifetime prediction, austenitic steel, 105
Threshold, 45
Tungsten fibers, copper matrix composite, life prediction, 91
TWIST, 19

U

Ultrasound
  fatigue lifetime prediction, 153
  high-power, fatigue behavior study, 141
Upper and lower bound damage, 19

W

Waste containment sites, polymeric materials, life prediction, 236
W/Cu composite, unidirectional, creep-fatigue life prediction, 91
