Subject Index

A

Abatement methods, 609
Abrasives, blasting, 514, 569
Accelerated batch leach tests, 413
Accelerated leach test, 477
Acetic acid, 147, 354
solutions, 73, 375
Acid buffering, 354
Advection, 540
Aluminate level, effect on paste properties, 147
Aluminates, 609
Arsenic, 272, 429, 499
Asphalt, 569
Attenuation, 413

B

Barium, 272
Barriers
concrete/metal, 540
placement, 174
subsurface, 174, 186, 596
walls, 596
Batch leach test, 80
accelerated, 413
sequential, 38
Bentonite, 584
Binders, 209, 442, 467, 569, 648, 691
Biocorrosion, 116
Bitumen, 327
Blast furnace slag, 251
Blasting abrasives, 514,
569
Blowdown, 327
Borates, 609
Borax, 341
Borosilicate glass, 311
Bridge paint removal, 514
Bulk site reference materials, 454

C

Cadmium, 94, 147, 354, 388, 429, 514
Calcium, 80, 116
Calibration, 685
Carbon, activated, 634, 691
Carbon adsorption, 667
Cation mobility, 388
Cavitation, ultrasonic, 413
Cell demonstrations, 685
Cement, 116, 251, 375
additives, 388
alkali-slag, 163
cement-based waste, 73
cement-silicate, 209
grouts, 186, 667
modified sulfur, 272
portland, 94, 147, 163, 514, 691
properties, 609
slurry pumps, oil field, 596
soil, 186
stabilizer, 80, 528
substitute, 135
sulfur polymer, 272
systems, 584
thermosetting polymer, cement-based, 298
Cementitious matrices, 135
Ceramic tube, 285
Cesium, 163, 388
Chromium, 94, 272, 354, 388, 499, 514
chloride, 147
Chrysene, 38
Clay, 224, 285
attapulgite, 251
organophilic, 691
Coal mining, 634
Coal tar, 691
Cobalt, 388
Compressive strength, 186, 691
sulfur cement, 272, 327
unconfined, 251, 499, 584
Concrete, asphalt, 569
Concrete/metal barriers, 540

727

Copper, 209, 388
Cracking, 540
shrinkage, 186
Cutoff wall, 596

D
Data interpretation method,
emissions prediction, 21
Diffusion, 388, 541
coefficient, 648
Directional drilling technique,
174
Drilling technologies
evaluation, 174
Durability, 691
long-term, 239

E
Electric arc furnace dust, 467
Emissions, predicting, 21
Encapsulation
polyethylene, 198, 327, 477
Energy dispersive X-ray, 499
EPICOR-II, 706
Equilibrium extraction, 413
Ettringite, 80, 354, 499
Explosives contaminated soils, 38

F
Failure indicators, 685
Field tests
cement-based grouting, 667
coal tar contamination
treatment, 691
lead contaminated soils, 209
lysimeter tests, 706
quality control strategies, 685
solidified waste evaluation,
467
Filtration, 667
Flame spray technology, 311
Flexural strength, 186
Fly ash, 251, 327, 467, 584
in filter cake, 80
in grout, 691
lime-fly ash, 209
Flow through, 354
Freeze-thaw cycles, 239
Freeze-thaw durability, 135

G
Glass abatement, 311
Glass forming frit, 341
Glass formulation development,
3
Graphite venting, 224
Grout, 174, 298
cement-based, 667, 186
evaluation, 691
jet, 596

H
Halocarbons, 667
Handling, bulk material, 442
Henry's law, 648
Hydration, heat of, 648
Hydration product, 163
Hydraulic conductivity, 667
Hydrothermal stability, 163
Hydroxide coprecipitation
sludge, 341

I
Ignition temperature, 327
Incineration, 327
Infrared spectroscopy, 198
Iron, 354, 388
ISV, in situ vitrification, 224,
285, 311

L
Laser reactor, 634
Leachability, 327, 388, 499
factors, 429
polynuclear aromatic
compounds, 691
Leaching, 73, 116, 239, 354,
375, 442
calcium hydroxide, 540
mechanisms, 477, 528
Leach resistance, 186
Leach tests, 80, 94, 135
accelerated, 413, 477
column, 147
field, 467
flow through, 354
quality control concerns, 685
sequential batch leach test, 38
INDEX 729

TCLP, 38, 52, 147, 272
  abrasive blast material, 569
  lead cation leachability rate, 311
  metal oxides, 272
  microwave solidification performance, 341
  quicklime and, 499
  shrinking core/exposure model, in, 528
  technology screening, 442
Lead, 94, 147, 209, 272, 354, 388, 429, 499, 528
  paint, 311, 514
Lime, 499
  Lime-fly ash, 209
Lysimeters, 706

M

Management program, hazardous waste site, 454
Matrix stability, 388
Melt front venting, in situ vitrification, 224, 285
Mercury, 94, 147, 272, 354, 429, 499
  intrusion test, 163
Metals (See also specific types), 73, 375, 429
  contamination in abrasive blast materials, 569
  concrete/metals barriers, 540
  heavy, 80, 94, 147, 341, 354, 499
  oxides, 272
  steel bridges, 514
  toxic, 327
Microbial degradation, 116
Microscopy, 73
Microwave solidification, 341
Mineral extraction technology, 174
Mixing operations, 21
Models and modeling, 388
  bulk diffusion, 528
  off-gas recycle, 3
  performance assessment, 706
  response surface, 251
  shrinking core, 528
SOURCE computer codes, 540
Monitoring
  material quality, 685
  on-line, 198
Morphology, 375
  changes, in leached wastes, 73
Mortars, cementitious, 135

N

Nickel, 354
Nitrate salts, radioactive, 198
Nitrate waste, 477
Nitrobacter, 116
Nitrocarbons, 634
Nitrosomonas, 116

O

Off-gas recycle, 3
Off-gas scrubbing solution, 327
Off-gas system, 224
Oily sludges, 584
Organic compounds, 52
  semivolatile, 648
Organic transformation, 38
Ozone, 634

P

Paint, lead, 311, 514
Paste flow study, 147
Pastes, alkali-slag cement, 163
Penetrometer, 584
Permeability, 174, 186, 224, 285, 596, 691
Permeameter, flexible wall, 354
PH profile, 375
  leached waste, 73
Phosphates, 609
Polyethylene, 198, 298, 327, 477
Polymer, 272, 298
  polyethylene, 198
Polynuclear aromatic compounds, 691
Polynuclear aromatic hydrocarbons, 38
Pore fluid, 648
Pore structure, 163
Pore water characterization, 94
Porosity, 375, 648
Potential of volatilization, 21
Pozzolan, 691
HAZARDOUS WASTES

Pozzolanic reaction products, 499
Precipitation options, 609
Process control, 198

Q

Quality control, 454, 685
Quicklime, 499

R

Ranking, stabilization/solidification processes, 454
Reactor, laser, 634
RECOSTA computer code, 388
Resins, 706
Recycled material, immobilization with, 52
Reference framework, emissions prediction, 21
Reference materials, 454
Rifle range, 209
River sediments, 691
Rubber, 52

S

Sandblasting grit, recycling, 569
Scanning electron microscopy, 163, 499
Screening procedures, technology, 442
bulk site reference materials, 454
Selenium, 429
Sequential batch leach test, 38
Shrinkage cracking, 186
Silica fume, 135
Silicate, cement, 209
Silver, 272, 429
Single-shell tank, 174
Slag, air-cooled blast furnace, 251
Slag binder, blast furnace, 467
Sludge, 499
emissions, 21
hydroxide, 341
oily, 584
synthetic metal, 375
Slurry, 596
Small arms range, 209
Sodium nitrate, 477
Soilsaw barrier system, 596
Solubility, 648
SOURCE computer codes, 540
Speciation, contaminants, 239
Spectroscopy, mid-infrared, 198
Steel bridges, 514
Subsurface confinement barriers, 174, 186, 596
Sulfate attack, 540
Sulfur, 634
cement, modified, 272, 327
oxidizing bacteria, 116

T

Tanks, single shell, 174
Total analysis methods, 52
TCLP, 38, 52, 147
abrasive blast material, 569
lead cation leachability rate, 311
metal oxides, 272
microwave solidification performance, 341
quicklime and, 499
shrinking core/exposure model, in, 528
technology screening, 442
Technology transfer, 442
Thermal processes, 634
Thermal spray technology, 311
Thermoplastic, 272, 327
Thiobacilli, 116
TNT, 38
Total analysis method, 52
Toxicity characteristic leaching procedure (TCLP), 38, 52, 147
abrasive blast material, 569
lead cation leachability rate, 311
metal oxides, 272
microwave solidification performance, 341
quicklime and, 499
shrinking core/exposure model, in, 528
technology screening, 442
Transient infrared spectroscopy, 198
Trenching, 596
Triaxial cell, 354
Trichloroethylene, 667
Trinitrotoluene, 38

U

U.S. Environmental Protection Agency, 239
land disposal regulation limits, 327
leaching procedure (See TCLP)

V

Vapor pressure, 648
Vapor transport, 224, 285
Vitrification technology, 3, 341
in situ, 224, 285, 311
Volatile compounds, 21
Volatile inorganic contaminants, 3

Volatile organic compounds, 52, 667
semi, 648
Volatilization, 21, 648
Volume expansion, 667

W

Waste Receiving and Processing Module 2A, 298
Waste treatment, 3
Weathering, chemical/physical, 239
WRAP 2A facility, 298

X

X-ray diffraction, 163, 354, 499
X-ray spectrometry, 311

Z

Zinc, 209, 354, 388, 609
