Subject Index

A
Anisotropy, 137

C
Capacity, ultimate, 376
Cavities, cylindrical, 232, 265
Clays
  lateral pile response in, 458
  pile load tests in, 376, 423
  saturated parameters, 214, 303,
   324
  self-boring stresses in, 137
  soft deltaic, 97
  strength parameters, 54, 339
Cohesion, 265
Cone penetrometer test, 38, 339
Consolidation, 169, 324
Constitutive theory, 187
Contracting soil, 150
Creep, 324
Cyclic loading, 121
Cylindrical cavities, 232, 265

D
Data acquisition and processing systems, 97, 137
Deltaic deposits, 97
Dilation, angle of, 245
Dutch cone tests, 339

E
Effective stress, 150
Elastic modulus, 90, 97
Elasto-plasticity, 121, 150, 169
End bearing, 357

F
Field vane tests, 339
Finite-element method, 121, 169, 232, 458
Foundations, offshore, 15
  deep, 376
  drilled pier, 406
  pile, 376, 423, 443
  raft, 406
  settlement, 406
  shallow, 357
  spread footing, 406
Friction angle, 53, 245, 265, 283

L
Load-deflection curves, lateral, 357
Loading, lateral, 137, 357, 443, 458

M
Modeling, 187, 324
Modulus determination, 75, 90, 97, 283, 303
Multi-yield surface model, 187

N
Numerical analysis, 150, 169 (see also Data acquisition and processing systems)

O
Offshore foundation design (see Foundations, offshore)
PAM (Pressiometre Autoforeur Marin), 5
Penetration, 339
Permeability, 169
Piers, 376, 406
Piles
foundations, 376, 423, 443
lateral response in clays, 458
load testing, 423
side friction mobilization rates, 478
torsion testing, 478
Pore water pressure, 97, 150, 169
Pressiometre Autoforeur Marin, 5
Pressuremeters
calibration, 75
cclays, use in, 54, 97, 137, 214, 303, 324, 339, 376, 423, 458
correlation with conventional tests, 18, 97
data reduction, 75
tfull displacement, 38
modulus, 303
PAM, 5
parameters, 303, 324
pile lateral response tests, 458
pile side friction tests, 478
push-in, 22, 41
rock, use in, 75
rubber membrane, 75
sand, use in, 53, 57, 245, 283, 303, 376
self-boring techniques, 5
settlement prediction, 406
standards, 303
test interpretation, 232
test techniques, 324
types, 40
unloading, 245
Prevost's Model, 187

R

Raft foundations, 406
Rock, 75

S

Sand, 53, 57, 245, 283, 303, 376
Self-boring techniques, 5
Settlement, 376, 406
Shafts, drilled, 376
Shear
modulus, 57, 88, 121, 245
strength, 57, 97, 121, 339
undrained, 214, 265
Side friction, 478
Size effects, 324
Skin friction, 357
Soils (see also Clays; Sand)
classification, 357
ccontracting, 150
disturbance, 283, 295
grigidity, 232
strength parameters, 324, 458
tension, 303
Strain hardening, 121
Strain, large, 232
Stress
effective, 150
horizontal, 137, 265
in situ, 57, 245, 265
lateral, 137, 265
Stressprobe, 22
Stress/strain relationships, 22, 187, 232

T

Triaxial tests, 214

V

Vane shear test, 339

Y

Young's modulus, 90
