Subject Index

A
Acoustic drop tower, 162
Aerospace structures, bearing strength behavior of fastener holes, 220
Aging, polymeric composites, 177
Aircraft applications and design for composite materials, 162, 238
Aircraft structural components, 238
Argon and air environments, 190, 194(table), 196(table)
ASTM Standard D 309, 23
titanium aluminides, 190
tubular G-10 laminates, 136
unidirectional laminates, 103, 205
woven fabric, thermo-elastic properties modeling, 263
Composite plate, 150
Compression, 7, 90, 103, 162, 276
Compression specimens, 90, 103
Compressive strengths, 117-119(table)
Creep, polymeric composites, 177
Curved, polymeric composites, 177
Curved shell, 263
Curved shell, 276
Cylindrical anisotropic elasticity, 276

B
Bars, circular and rectangular, 53
Bearing strength behavior, fastener holes, 220, 224-225(tables)
Behavior, fatigue, environmental effect, 190
Behavior, woven fabric composites, 263
Bending stiffness, 323
Biaxial testing, 136

C
Carbon fiber epoxy materials, 7, 333
Characterization, 263
Circular bar, 53
Clearance fit holes, 220
Composite materials cylindrical shells, 276
delamination fracture toughness, 291
failure criterion, 303
fiber composite lamina, 7
fiber-matrix interface stresses, 205
graphite epoxy, 23, 238
interlaminar tensile strength, 333
isotropic and orthotropic materials, 150
laminates for extension-twist coupling, 249
Iosipescu, 70
multiaxial ply, 124
strain rate effects, 162
thermomechanical fatigue behavior, 190
thick composites, 90

D
Deformation behavior tests, 7, 249
Delamination
graphite/epoxy composites, 23
mixed-mode loading, 291
ply-drop configurations, 323, 328(table)
tensile strength specimen, 333
tubular laminates, 136
Delamination failure criteria, 303, 318(table)
Design, aircraft structural components, 238
Design, thick composite shells, 276
Diamond array, 205
Dynamic response, composite materials, 162

E
Elastic properties, 150, 156-158(tables), 177, 263
Elastic tailoring, 249
Elasticity, 276
Elevated temperature, 177
End effects, inelastic shear response, 53
Environment, thermomechanical fatigue effects of air and argon, 190
Extension twist coupling, design and testing of composite laminates, 249
Experimental stress analysis, 238
Fabric composites, thermo-elastic properties, 263
Fabrication, woven fabric composites, 263
Failure
  biaxial testing, 136
  environmental influences, 190
  graphite epoxy, 23, 27(table), 29-30(tables)
  mixed mode delamination, 303
  off-axis flexure test, 124
  thermomechanical fatigue behavior, 190
  thick cylindrical shells, 276
  unidirectional composites, 53
Failure behavior, 136
Failure criteria, mixed mode delamination, 291, 303, 318(table)
Failure mechanisms, 323
Fastener holes, bearing strength behavior, 220
Fatigue, delamination, 323
Fatigue testing, 291
Fatigue, thermomechanical, 190
Fiber composite lamina properties, 7
Fiber matrix interface stresses, 205
Fiber polymer composites, 162
Fiber reinforced composites, 291
Fiber reinforced titanium aluminides, 190
Finite element analysis, 103, 220, 238
Fracture toughness, 291

Graphite/epoxy properties
  bearing strength behavior, 220
  inelastic shear response, 53, 54-55(tables)
  interface stresses, 205
  Iosipescu specimen shear property, 70
  shells or rings under hydrostatic pressure, 276
  stress/strain behavior, 177
  transverse tensile strength, 23, 27-30(tables)
  unidirectional composite laminates, 103

High strain rates, 162
Hole interaction, 238
Holes, stress concentrations, 238
Hydrostatic pressure, 276
Hygrothermal stresses, 249

Inelastic shear response, 53
Interface stresses, micromechanical analysis, 205
Interlaminar fracture toughness, 291
Interlaminar stress, 323
Interlaminar tensile strength, 333
Intermetallic matrix composites, 190
Iosipescu specimen, 70
Isotropic materials, 150

Lamina properties, 7
Laminated composites, 249, 291
Laminated shells, 276

Material nonlinearity, 177
Material properties of thick composites, 90
Matrix crack, 23
Matrix dominated lamina properties, 7, 8, 9(tables), 14(table)
Mechanical properties of lamina, 7
Metal matrix composites, environmental influences, 190
Micromechanics, 7, 205
Mixed mode delamination failure criteria, 303, 318(table)
Mixed mode strain energy release rate, 291
Modal analysis, 150
Modeling, woven fabric composites, 263
Moire interferometry, 70
Multiaxial ply strength, 124

Nonlinear shear response of unidirectional composites, 53

Off-axis flexure test, 124, 133(table)
Optimization methods, 249, 258(table)
Organic matrix composites, 90
Orthotropic materials, 150

Particulate composite, 70
Pin bearing strength, 220
Plate vibration test, 150
Ply-drop, 323
Ply strength, 124
Polymer composites
  bearing strength behavior, 220
  material properties, 181(table)
  strain rate effects, 162
  stress/strain behavior, 177
Polymer resins, 150, 156-158(tables)

Rectangular bar, 53
Repeating sublaminate, 276
Repeating unit cell, 105
Residual stress, 276

Scale laws, 23
Shear deformation, 263
Shear modulus
  fiber composite lamina, 7, 18(table)
  Iosipescu specimen, 70
  unidirectional composites, 53
Shear test methods, 70
Sheet molding compound (SMC), 70
Short beam shear, 7
Specimen/fixture contact mechanics, 70
Square array, 205
Stacking sequence, 276, 284-285(tables)
Static tension, 323
Stiffness, delamination, 323
Strain concentration, 238, 245(table), 247(table)
Strain energy release rate, 291, 323
Strain measurement, 238
Strain rate effects, 162
Strength, 7, 23(tables), 136, 220
Stress
  cylindrical shells, 276
  environmental effects, 190
  fiber-matrix interface stresses, 205
  finite element analysis, 23, 103, 124
  graphite/epoxy composite panels, 238, 245(table), 245(table)
  interlaminar tensile strength specimen, 333
  polymeric composites, 177
  Structural components, 238, 263
  Superalloys, thermo-mechanical fatigue behavior, 190

T
Temperature, stress/strain behavior in polymeric composites, 177
Tensile and compressive properties, 162
Tension, 7, 16(table), 23, 43(table), 270-271(tables)

Test methods
  compression, 90, 124
  elastic properties, 150
  finite element analysis, 103, 220
  isotropic and orthotropic materials, 150
  micromechanical analysis, fiber-matrix interface stresses, 205
  strain rate effects, 162
Thermomechanical fatigue (TMF), 190, 205
Thermo-elastic properties, woven fabric composites, 263
Thick composites, 90
Thick sectioned composites, 276
Titanium aluminide composite, 190
Torsion
  solid bars, 53, 65(table)
  tubes and rods, 7
Torsion test, 53
Toughened resin, 220
Toughness testing, 303
Transverse properties, 7, 23, 39(table)

Unidirectional composites
  compression, 103
  cylindrical shells under hydrostatic pressure, 270(table)
  extension twist coupling, 249
  ply-drop configurations, 323
  solid bars, 53
  woven fabric complex shapes, 263

Vibration, 150
Viscoplasticity, polymeric composites, 177

Waring, woven fabric composites, 263
Weibull statistics, 23
Woven fabric
  shear property, 70
  thermo-elastic properties, modeling, 263
  Wyoming fixture, 70
