Instruments and Apparatus for Soil and Rock Mechanics

ASTM STP 392

AMERICAN SOCIETY FOR TESTING AND MATERIALS
INSTRUMENTS AND APPARATUS FOR SOIL AND ROCK MECHANICS

ASTM SPECIAL TECHNICAL PUBLICATION NO. 392

Price $8.50; to Members $5.95

published by the AMERICAN SOCIETY FOR TESTING AND MATERIALS 1916 Race Street, Philadelphia, Pa. 19103
NOTE

The Society is not responsible, as a body, for the statements and opinions advanced in this publication.
Foreword

The papers in this volume were presented at the Symposium on Instrumentation and Apparatus for Soil and Rock held on June 14, 1965 during the Sixty-eighth Annual Meeting of the Society, at Lafayette, Ind. The symposium was sponsored by Committee D-18 on Soil and Rock for Engineering Purposes, with E. B. Hall, Geo-Testing, Inc., and E. T. Selig, Illinois Institute of Technology, serving as co-chairmen for the two sessions.

## Contents

Planning Soil Dynamics Instrumentation—E. T. SELIG AND R. P. JOYCE .......................................................... 1

The Development of a Free-Field Soil Stress Gage for Static and Dynamic Measurements—J. K. INGRAM .......................................................... 20

Discussion ................................................................................................................................. 36

Stresses and Strains in Triaxial Specimens—C. K. JANUSKEVICIUS AND E. VEY .................................................. 37

Discussion ................................................................................................................................. 53

Apparatus for Vibration of Soil Specimens During the Triaxial Test—B. O. HARDIN AND J. MUSIC .......................................................... 55

Discussion ................................................................................................................................. 74

A Hydraulic Earth Pressure Cell—K. R. PEAKER .............................................................................. 75

A Technique for Measurement of Shock-Induced Soil-Structural Motion—
J. O. MCCUTCHEON, R. N. YONG, AND S. B. SAVAGE ........................................................................ 82

Instrumentation for Movements Within Rockfill Dams—S. D. WILSON AND C. W. HANCOCK, JR. ........................................................................ 115

Measurement of Embankment Stresses on a Hundred-Foot-High Retaining Wall—G. H. KRUSE ........................................................................ 131

Measurement of Hydrostatic-Uplift Pressure on Spillway Weir with Air Piezometers—A. A. WARLAM AND E. W. THOMAS ........................................................................ 143

An Instrument to Measure Skin-Friction and Normal Earth Pressure on Deep Foundations—S. L. AGARWAL AND S. VENKATESAN .......................................................... 152
