Foreword

The symposium on Buried Plastic Pipe Technology was held in Dallas, Texas, on 10–13 Sept. 1990. ASTM Committee F-17 on Plastic Piping Systems and Subcommittee D20.23 on Reinforced Plastic Piping Systems and Chemical Equipment sponsored the symposium in cooperation with ASTM Committees D-20 on Plastics and D-18 on Soil and Rock, the Uni-Bell PVC Pipe Association, the Fiberglass Pipe Institute, and the Plastics Pipe Institute. George S. Buczala, Philadelphia Electric Company, and Michael J. Cassady, Battelle Columbus Laboratories, served as co-chairmen of the symposium and co-editors of the resulting publication.
Acknowledgment

On behalf of the symposium planning committee, we thank the speakers for their preparation and participation, the peer reviewers for their time, and the ASTM Staff for their patience.

George S. Buczala and Michael J. Cassady
Contents

Overview 1

TESTING AND STANDARDS

Retention of Pipe Stiffness for Polyvinyl Chloride (PVC) Pipe Samples Exposed to Various Environments and Constant Strain—RONALD R. BISHOP 7

The Durability of Polyethylene Piping—STANLEY A. MRUK 21

Fiberglass Pipe Product Standards—An Update on Performance—LEE E. PEARSON 40

ATV A 127—As It Relates to Plastic Pipe Design—HUBERT SCHNEIDER 57

The Role of ANSI/NSF Standard 61 and Third-Party Certification in Providing Safe Drinking Water—DAVID A. GREGORKA, PETER F. GREINER, STAN S. HAZAN, AND MICHAEL F. KENEL 79

Ultrasonic Evaluation of Polyethylene Butt Fused Joints—T. H. (TED) STRIPLIN 92

The Fatigue Response of Polyvinyl Chloride and Polyethylene Pipe Systems—JEREMY A. BOWMAN 101

DESIGN

Load-Deflection Field Test of 27-Inch (675-mm) PVC (Polyvinyl Chloride) Pipe—AMSTER K. HOWARD 125

Soil Properties for Plastic Pipe Installations—ERNEST T. SELIG 141

Is PVC Pipe Strain Limited After All These Years?—A. P. MOSER, O. K. SHUPE, AND R. R. BISHOP 159

Field Experience, Performance Testing and Design of Very Flexible Thermoplastic Pipe Systems—PETER G. CHAPMAN 171

Vertical Deflection of Buried Flexible Pipes—MARK E. GREENWOOD AND DENNIS C. LANG 185
CONTENTS

INSTALLATIONS

Field Experience with Fiberglass Pipe in the Middle East—
KLEOVoulos G. LEONDARIS

Some Experience with 30 Years Old Buried (upVC) Pipes from the Viewpoint of Stress and Strain—F. J. M. ALFERINK

The Design of Underground Thrust Restraint Systems for Polyvinyl Chloride (PVC) Pipe—HAROLD KENNEDY, JR., DENNIS D. SHUMARD, AND CARY M. MEEKS

Review of the Relationship Between Internal Shear Resistance and Arching in Plastic Pipe Installations—LARRY J. PETROFF

Recent Trends in Installation Standards for Plastic Pipe—TIMOTHY J. MCGRATH, RICHARD E. CHAMBERS, AND PHILLIP A. SHARFF

REHABILITATION

Large Diameter Sewer Rehabilitation by Sliplining in Florida—
JOHN E. COLLINS, JR.

Reduction, Reversion, Renovation:R3—HARVEY SVETLIK

Cured-in-Place Pipe: An End User Assessment—PHILIP M. HANNAH

Review of Design and Experience with Thermoplastic Outfall Piping—
LARS-ERIC JANSON

Use of Continuum Buckling Theory for Evaluation of Buried Plastic Pipe Stability—IAN D. MOORE AND ERNEST T. SELIG

APPLICATIONS/END USERS

Installation of Fiberglass Pipe on Sewer Force Main Projects—ROBERT J. BAILEY

Plastic Pipes Under High Landfills—REYNOLD K. WATKINS

15 Year Old Polyvinyl Chloride (PVC) Sewer Pipe: A Durability and Performance Review—DENNIS E. BAUER
