SYMPOSIUM ON LIME

Columbus Regional Meeting
AMERICAN SOCIETY FOR TESTING MATERIALS
March 8, 1939

Published by the
AMERICAN SOCIETY FOR TESTING MATERIALS
FOREWORD

The papers and discussion appearing in this volume were presented at the Symposium on Lime held at the tenth regional meeting of the American Society for Testing Materials, Columbus, Ohio, March 8, 1939. The technical program was sponsored by Committee C-7 on Lime. This symposium covers a number of fundamental aspects, certain research angles, and deals especially with problems in the practical application of lime in its various forms.

While Committee C-7 on Lime has been acting as a committee of the whole, six of its members have been strictly responsible for its development, as follows:

James R. Withrow (Chairman), Chairman and Professor, Department of Chemical Engineering, and Consulting Chemical Engineer, Ohio State University.
John W. Stockett, Jr. (Secretary), Secretary, National Lime Assn.
F. O. Anderegg, Consulting Specialist on Building Materials, Owens-Corning Fiberglas Co.
L. E. Johnson, Secretary and General Manager, The Finishing Lime Assn. of Ohio.
James O. Pence, Instructor in Chemical Engineering, Ohio State University.
J. C. Pearson, Director of Research, Lehigh Portland Cement Co. (representing Committee E-6 on Papers and Publications).

Mr. Withrow served as chairman of the session, assisted by Mr. Anderegg as co-chairman.
Note.—The Society is not responsible, as a body, for the statements and opinions advanced in this publication.
CONTENTS

Lime Investigations—An Introduction to the Symposium on Lime—James R. Withrow........ 1
Variations in Properties of Dolomitic Lime Putties with Method of Hydration—John E. Conley ................................................................. 7
Discussion ............................................................................................... 8
The Hydration of Magnesian Lime and the Autoclave Test—F. C. Welch ..................... 20
Discussion ............................................................................................... 30
Manufacturing Lime for the Glass Industry—A. H. Nieman ......................................... 32
Discussion ............................................................................................... 34
Factors Affecting Milks of Lime Employed in Industry—D. E. Washburn .................. 36
Discussion ............................................................................................... 40
Quality of Lime Desired for Water Treatment—Charles P. Hoover ............................ 43
Discussion ............................................................................................... 47
Prevention of After-Precipitation in Lime-Treated Industrial and Municipal Waters by Threshold Treatment—Owen Rice, Everett P. Partridge and R. E. Hall ................................. 50
Discussion ............................................................................................... 54
Soil Acidity and Liming, and Some Factors that Should Determine the Standards for Lime for the Soil—Elmer O. Fippin ....................................................... 56
Criteria for the Evaluation of Agricultural Ground Limestone—R. M. Salter and C. J. Schollenberger ............................................................... 71
Preliminary Investigation of the Determination of Fluorine in Lime—C. J. Koehler .... 83
Fundamental Mechanics of Calcination and Hydration of Lime and Methods of Control—Victor J. Azbe ................................................................. 88
Lime Characteristics and Their Effect on Construction—Walter C. Voss .................... 103
Discussion ............................................................................................... 117
