FOREWORD

The papers and discussions in the Symposium on Structural Fatigue in Aircraft were presented at the Fifth Pacific Area National Meeting of the Society held in Seattle, Wash., Oct. 31–Nov. 5, 1965. This symposium was sponsored by Committee E-9 on Fatigue under the chairmanship of M. S. Rosenfeld, Naval Air Engineering Center, Philadelphia, Pa.

Contents

Introduction ................................................................. 1
Contractual Reliability Acceptance Procedures—J. DE S. COUTINHO .... 3
Fatigue Failure of a Redundant Structure—R. A. HELLER AND R. C. DONAT ....................................................... 55
The Material Aspect of Reliability—A. M. FREUDENTHAL .......... 67
Random-Loading Fatigue Crack Growth Behavior of Some Aluminum and Titanium Alloys—S. H. SMITH ....................... 74
Evaluation of Fatigue Capabilities of High-Performance Military Aircraft—E. D. BOUCHARD ...................................................... 101
Discussion ................................................................. 132
Development of a Scatter Factor Applicable to Aircraft Fatigue Life—L. F. IMPELLIZZERI ..................................................... 136
Discussion ................................................................ 157
Fatigue Tests of Unmachined, Mechanically Machined, and Chemically Machined Panels of Aluminum and Titanium Alloys—R. E. WHALEY ......................................................... 158
Interaction of Cyclic Torsion with Axial Loads—MARIA RONAY .... 176
Roll Fatigue Tests of Forged ZK60A-T5 Magnesium and 2014-T6 Aluminum Wheels—R. D. BEHR AND S. CAMPBELL .......... 190

The drawings on the covers are taken from a patent application for a "Flying Machine," by Orville and Wilbur Wright, dated May 22, 1906. They are reproduced through the courtesy of Cambridge Archives.
THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country’s leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
