NOTE

The Society is not responsible, as a body, for the statements and opinions advanced in this publication.
Foreword

The Symposium on the Effects of Residual Elements on Properties of Austenitic Stainless Steels was presented in two sessions during the 69th Annual Meeting of the Society, in Atlantic City, N. J., 26 June–1 July, 1966. The symposium was sponsored by Committee A-10 on Iron-Chromium, Iron-Chromium-Nickel and Related Alloys. The symposium chairman was R. B. Gunia, U. S. Steel Corp. Presiding at the two sessions were S. E. Tyson, Carpenter Steel Co., and M. W. Marshall, Armco Steel Corp.

Contents

Introduction ........................................................................................................... 1
Discussion ............................................................................................................. 22
Effects of Residual Elements on Cold Rolling and Finishing of Austenitic Stainless Steels—T. A. PRUGER, F. BLAKE, AND J. A. VALLEY ................................................................. 24
Residual Elements in Austenitic Stainless Steels—The Melt Shop Viewpoint—G. N. GOLLER ......................................................................................................................... 37
Discussion ............................................................................................................. 45
Effects of Minor Constituents on Irradiation Damage to Austenitic Stainless Steels—A. L. BEMENT ......................................................................................................................... 46
Discussion ............................................................................................................. 77
Residual Elements and Their Effect on Applications of Austenitic Stainless Steels in the Power Industry—J. A. ROHRIG .............................................................................................................. 78
Effects of Residual Elements on the General Corrosion Resistance of Austenitic Stainless Steels—L. R. SCHARFSTEIN ............................................................................................................. 90
Weldability of Austenitic Stainless Steels as Affected by Residual Elements—G. E. LINNERT ......................................................................................................................... 105
Discussion ............................................................................................................. 119
Residual Elements in Stainless Steel—General Characteristics—J. J. HEGER ......................................................................................................................... 120
THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
